

ARISTO – PhD Fellowship

ARISTO: The European Industry - Academia Network for Revising and Advancing the Assessment of the Soil Microbial Toxicity of Pesticides

PhD scholarship in soil microbial ecology (ARISTO)

University of Thessaly, Department of Biochemistry and Biotechnology, Laboratory of Plant and Environmental Biotechnology and Metabolic Insights Ltd, Ness Ziona Industrial Park, Israel

University of Thessaly and Metabolic Insights Ltd, are offering a PhD scholarship in soil microbial ecology with expected commencement May 2021 or as soon as possible thereafter. The PhD will be awarded by the University of Thessaly, Greece.

Project title: ESR8: Assessing the toxicity of bio-pesticides on soil microorganisms

Project description

To date biopesticides including microbe-based pesticides and natural products (or botanicals) are gaining interest in the pesticide market. They are considered environmentally safe although solid evidence for their reduced off-target toxicity are still lacking. The project will (i) examine the hypothesis that bio-pesticides are non-toxic, or less toxic than synthetic pesticides, to soil microorganisms and (ii) assess the overall soil microbial toxicity of bio-pesticides on functional microbial endpoints. In this frame lab microcosm and field tests will be undertaken to examine the toxicity of a range of biopesticides (vs synthetic pesticides) on the overall soil microbial diversity and on functional microbial diversity (e.g. ammonia-oxidizing microorganisms and arbuscular mycorrhizal fungi) using a range of molecular tools (amplicon sequencing, metagenomics, q-PCR), microscopy and advanced analytical methods. The experimental process will involve collaboration with other fellows' projects providing a holistic assessment of the soil microbial toxicity.

The PhD position is associated to a larger European training network, ARISTO (<https://aristo.bio.uth.gr>), funded by the European Commission for 48 months. The ARISTO project offers 8 other PhD positions at other participating institutions. We strongly encourage candidates to also apply for other similar positions within the ARISTO network.

Principal supervisor: Prof. Dimitrios Karpouzas, dkarpouzas@uth.gr, +30-2410565294 and Dr G. Wittenberg, gal@metabolic-insights.com,

Planned secondments: (i) to **Western Sydney University**, Australia Supervisor: Prof. B. Singh, 2 month, Purpose: Get training on analysis of pesticide effects on the soil microbiome using advanced bioinformatic tools (ii) to **BAYER CropScience**, Germany, Supervisor: Dr M.T. Marx, 1 month, Purpose: Get training on environmental risk analysis and calculation of toxicity endpoints

Brief Project Description

ARISTO is an International Training Network (ITN) funded by the European Union's Horizon 2020 research and innovation programme under Marie Skłodowska-Curie grant agreement. Pesticides are major environmental pollutants. For this reason the European Commission has imposed a stringent pesticide regulatory scheme for pesticides authorisation, where risk assessment for aquatic organisms and terrestrial macro-organisms is well defined. In contrast the assessment of the toxicity of pesticides on soil microorganisms is lagging behind, still relying on an outdated protocol which fails to identify effects on key microbial functions and on microbial diversity, which can now be accurately determined through advanced and standardized methods introduced in soil microbiology in the last 10 years. EFSA identified soil microorganisms as an attribute to monitor during pesticides environmental risk assessment and stressed the need for novel tests to assess the toxicity of pesticides on soil microorganisms. **The ARISTO project will fulfil this scientific and regulatory gap through a unique doctoral program, based on the strong interaction of academia and industry, aiming to train the next**

ARISTO – PhD Fellowship

generation of Microbial Ecotoxicologists. These will produce benchmarking knowledge supporting the development of advanced tools and procedures, based on the response of key microbial indicator groups, for the comprehensive assessment of the toxicity of pesticides on soil microorganisms. ARISTO offers doctorate fellows a challenging training program build along 5 research objectives: (1) to develop pioneering *in vitro* tests, as a first conservative step, to assess the toxicity of pesticides on distinct ammonia-oxidizing microorganisms and arbuscular mycorrhizal fungi (2) to develop advanced lab and field tests to assess the toxicity of pesticides on natural soil assemblages of AOM and AMF, as a more realistic toxicity assessment step; (3) to develop an ecosystem-level toxicity assessment looking at pesticide effects at microbial networks and across different trophic levels along the soil food web (predator - prey); (4) to develop novel tools to determine the soil microbial toxicity of pesticide mixtures, and bio-pesticides; (5) to develop and validate advanced *in silico* tools for prioritizing pesticide transformation products with potential toxicity to soil microbes

Job description

The position is available for a period of 36 months on these terms. Your key tasks as a PhD student in ARISTO are:

- Participate in the research environment at the host institutions and the network activities of ARISTO
- Manage and carry through your research project
- Take PhD courses
- Write scientific articles and your PhD thesis
- Participate in congresses
- Teach and disseminate your research

Key criteria for the assessment of candidates

- A master's degree related to the subject area of the project
- The grade point average achieved should be more than 75 % of the maximum
- Professional qualifications relevant to the PhD programme
 - Relevant skills: soil microbial ecology, bioinformatics, biostatistics, knowledge or prior experience to biopesticides will be a merit
- Previous research publications
- Other professional activities
- Language skills: fluency in English

Formal requirements and eligibility

At the time of commencement, it is required that the candidate shall at the date of recruitment, be in the first four years¹ (full time equivalent research experience) of their research careers and have not been awarded a doctoral degree. Furthermore, the candidate **must not** have resided or carried out their main activity (work, studies, etc.) in Greece and Israel for more than 12 months in the 3 years immediately prior to their recruitment. Short stays, such as holidays, are not taken into account. The candidate is required to spend part of their project period at other institutions in the ARISTO consortium on secondments.

Terms of employment

Recruitment and Terms of appointment will be done according to the rules and regulations of the hosting institutions and according to the rules and regulations laid down by European Union's Horizon 2020 Marie Curie Initial Training Networks. The stipend includes a living allowance (3270 €, adjusted by a country correction factor), mobility allowance (600 €) and family allowance (500 €), the latter allowance depending on the family status of the fellow.

¹ is measured from the date when a researcher obtained the degree which would formally entitle him or her to embark on a doctorate, either in the country in which the degree was obtained or in the country in which the researcher is recruited, irrespective of whether or not a doctorate is or was ever envisaged

ARISTO – PhD Fellowship

Place of Employment

- **University of Thessaly**, Department of Biochemistry and Biotechnology, Laboratory of Plant and Environmental Biotechnology, Larissa, GREECE, Website: <https://plantenvlab.bio.uth.gr> (Month 1 to 18)
- **Metabolic-Insights**, Ness Ziona, Israel, Website: <https://metabolic-insights.com/> (Month 19 to Month 36)

Please notice that this PhD fellowship involves a split PhD studentship between an academic and an industrial partner. Hence the selected fellow will have to spend 18 months in the premises of the University of Thessaly and 18 months in the premises of Metabolic Insights Ltd, while the fellow will also spend time to other partners through short secondments, see above.

Application Procedure

The application, in English, must be submitted by mail to dkarpouzas@uth.gr, and gal@metabolic-insights.com

Please include

- Motivation Letter, stating which PhD project you are applying, why you want to pursue a PhD career in academic and industrial sectors, and to what extent does the given project complies with your skills and ambition.
- A statement if (and which) you have applied for other ARISTO PhD fellowships
- Full CV including studies, research experience, work experience and publications if any
- Diploma and transcripts of records (BSc and MSc)
- 3 professional referees (Name, address, telephone & email)
- Documentation of English language qualifications

The University of Thessaly and Metabolic Insights Ltd wish our staff to reflect the diversity of society and thus welcomes applications from all qualified candidates regardless of age, gender, race, religion or ethnic background.

The deadline for applications is 20.1.2021. Applications received later than this date will not be considered.

Recruitment Process: After the expiry of the deadline for applications, the project manager will provide all applications to the members of the recruitment committee. A recruitment sub-committee for this position composed of the members of the Supervisory Committee (Academic Supervisor, Industrial Supervisor and Secondment Supervisor) will evaluate all applications and select the best three candidates based on the quality of the candidates' previous training, qualifications and skills (as listed above), CV and their motivation for the research topic. The best three candidates will be interviewed by the recruitment committee which will select the best applicant for the position taking into consideration the recommendation of the co-supervisors for the position. The applicants will be notified of the final selection by the Project Manager and will be given 7 days to accept or decline.

Questions

For specific information about the PhD scholarship, please contact the principal supervisors Prof. Dimitrios Karpouzas (dkarpouzas@uth.gr Tel. +3024105652904) and Dr Gal Whittenberg (gal@metabolic-insights.com)
